

# Weekly Meeting Report

SPL - Team 5

May 30, 2025

## Meeting Overview

This document summarizes the discussions and suggestions made by our project supervisor during this week's meeting regarding the **Medi X** healthcare management system.

## Key Points Discussed

- **Upload Meeting Content to GitHub:** The supervisor advised uploading this meeting report and related documentation to the project's GitHub repository to maintain version history and allow team-wide access.
- **Doctor Homepage Update:** It was suggested to remove the profile information from the doctor's homepage and place it under a separate "About" section to streamline the dashboard interface.
- **Prescription Button Renaming:** The "Prescription" button should be renamed to **Quick Prescription** to better reflect the functionality and provide clearer action context for doctors.
- **Search Suggestions Feature:** While using the search bar in the patient history or any other relevant pages, the system should show dynamic suggestions as the user types to improve usability and search efficiency.
- **Sell Medicine Page Enhancement:** On the sell medicine interface, after entering a prescription ID, the medicine list should auto-fill based on the linked prescription data to save time and reduce manual errors.

## Next Steps

We will begin implementing these changes in the coming development cycle and ensure all updates are versioned and committed to GitHub.
